## “The Box”

### **Giant Supreme Extension Cord!**

In essence, “The Box” is a giant extension cord with the equivalent of 50 feet of our Supreme Power Cable using our time-accurate cable technology.

### **No Electronics Or Circuitries**

Unbelievable as it may seem: there are no electronics or active circuitries of any kind, either in series or in parallel, inside “The Box”.

### **How Does It Work?**

“The Box” works like our Power Cables in two unique ways:

1. To supply unrestricted and instantaneous current.
2. To attenuate electrical noises.

### **Constantly Changing Current Demand**

Audio and video signals are almost never constant but change rapidly and continuously, with respect to time. Most A/V equipment will draw varying amounts of electricity in accordance to the workload required at different moments, all in accordance with the program materials.

### **Less Inductance, Faster Transit Response**

By practically eliminating inductance, our patent pending technology empowers “The Box” with extremely fast transit response, thus freeing it to operate with an almost superconductor-like pathway for electricity.

### **Noise-Attenuating Capability**

By virtue of our patent pending design with its revolutionary conductor configuration, “The Box” has inherent noise-attenuating capability, which improves in direct proportion to the length of our unique conductor-core used.

### **What Are The Results?**

For audio equipment, the improvements are more coherent imaging, more vivid 3-D soundstage, cleaner sound, and more natural ambience. Power amplifiers would work with much ease as if they have become more powerful.

For video equipment, especially with projectors, the images would become brighter; have better contrast, color balance and saturation, fewer artifacts, and improved resolution.

### **Features:**

- Unique combination of MDF and metal chassis for the best overall acoustic properties.
- Proprietary damping of conductor-core for optimal control of vibration and resonance.
- Shielding provided by unique combination of copper and aluminum chassis.
- Special grounding post for star grounding of the entire A/V system to minimize noise level and prevention of ground loop.
- Pure brass connectors selected for best audio and video performance over gold or rhodium plated ones.
- Totally passive. Does not consume electricity. No active parts to repair.
- A set of three softwood support pegs provided for superior acoustical properties. Ebony pegs available at additional cost.
- Dimensions: 19" W x 13" D x 6" H (48.3 x 33 x 15.2 cm)
- Net weight: Approx. 60 lbs (27.3 Kg).

### **Specifications:**

- One 110v, 20-amp Hubble IEC inlet.
- Four individual 110v, 15-amp Hubble receptacles.
- Rated for 15-amp continuous draw.

### **Awards:**

- 2006 Publisher’s Choice Award presented by The Stereo Times.

## 600 Series Cables

### **Least Expensive Reference Cables**

Although it is our least expensive reference cables, our 600 Series will out-perform all other designs of reference cables on the market, regardless of price!

### **Out-Performs All Other Cable Designs**

Really? Yes, really! The reason is very simple. No other cable designs could effectively eliminate inductance like our patent pending technology. And if you could not drastically reduce inductance in a cable, you cannot transmit audio or video signals accurately.

### **Top Quality Production**

Even though our 600 Series cables are value-priced, they are not cheap production models.

In fact, since June 2005, all our 600 Series cables have been substantially upgraded with the following features:

### **Features:**

- Patent pending conductor-core design assures time-accuracy.
- Multi-layered shielding system effectively stops EMI and RFI from entering the signal pathway.
- Unique external ground wire (except Power Cables, which are grounded through the connector's ground pin) to drain away external interferences at the first instance.
- Special plugs and connectors selected for their exceptional performance in audio and video applications.
- Pearlescent White Teflon sleeves standard. Conductive Black sleeve available as option.
- Handcrafted in U.S.A.

### **Reviews:**

- February 2007 – “Cables R Us Part Six: Sunny Cable Technology Cables” by Roy Harris, Reviewer for Audiophilia.
- May 2006 – “Sunny Cable 600 Series: “Time Accurate” Home Theatre Cables” by Danny Richelieu, Managing Editor for Widescreen Review.
- April 2005 – “Sunny Cable Technology Cables” by Michael Wright, Reviewer for The Stereo Times.

### **Awards:**

- 2007 Most Wanted Component Award presented by The Stereo Times.

## 1000 Series Cables

### **Best-Value Reference Cables**

While the 600 Series reference cables are for the budget conscious, the 1000 Series reference cables are for the value minded.

We design the 1000 Series cables to be capable of delivering more than 70% of the performance of our top-of-the-line Supreme cables. Yet the 1000 Series cables are only marketed at a fraction of the price of our Supreme cables.

### **Best Performance at Shows**

We were so confident about the capabilities of our 1000 Series cables that we used them exclusively for our Home Theater and two Stereo Music demos at CES 2006. The level of excellence exhibited was pushed up so high above existing standards, there was no need to bring out the Supremes!

### **A Definite “Best Buy”!**

Undeniably, our 1000 Series cables have the best performance per dollar value of all cables in the world.

Therefore, in terms of performance value, our 1000 Series reference cables are definitely a “best buy”!

### **Features:**

- More elaborate conductor-core design (patent pending) that is very close to the sophistication of our Supreme cables.
- Multi-layered shielding system effectively stops EMI and RFI from entering the signal pathway.
- Unique external ground wire (except Power Cables, which are grounded through the connector’s ground pin) to drain away external interferences at the first instance.
- Special plugs and connectors selected for their exceptional performance in audio and video applications.
- Pearlescent White Teflon sleeves standard. Conductive Black sleeve available as option.
- Handcrafted in U.S.A.

### **Reviews:**

- August 2007 – “Musical Honesty – The Best Policy” by Greg Petan, Managing Editor for The Stereo Times.
- September 2005 – “Sunny Cable Technology 1000 Series Cables” by Arnis Balgalvis, Executive Editor of The Audiophile Voice.

### **Awards:**

- 2007 Editor’s Choice Award presented by The Stereo Times.
- 2005 Most Wanted Component Award presented by The Stereo Times.
- Audiophilia Best – Best Sound of CES 2006.

## Supreme Series Cables

### Best Reference Cables In The World!

Supreme. State of the art. Best of the best. Crème de la crème.

These are our top-of-the line cables. They represent the culmination of everything we know about designing and making cables.

Only the best materials are used with meticulous attention to details. Nothing is held back. The result is the absolute best cables money can buy.

### Totally "Invisible"!

What are the "sonic attributes" of our Supreme cables? Well, there are none!

In fact, if you regard other reference cable designs to be "neutral" or "transparent", then by comparison, our Supreme cables would be totally "invisible"!

### Supreme!

What more can we say? How can mere words describe a viewing and listening experience so profound and enlightening? How can a person imagine the unbelievable level of realism and accuracy when he or she has never experienced it before?

You simply can't. You'll have to experience it firsthand to fully appreciate it.

The Supreme Series reference cables are for people who insist on having the best, and only the best.

The name says it all. Supreme. There is no competition, at any price. Period!

### Features:

- Most elaborate and sophisticated application of our patent pending conductor-core design. The best that we know how.
- Multi-layered shielding system effectively stops EMI and RFI from entering the signal pathway.
- Unique external ground wire (except Power Cables, which are grounded through the connector's ground pin) to drain away external interferences at the first instance.
- Special plugs and connectors selected for their exceptional performance in audio and video applications.
- Choice of Pearlescent White Teflon or Conductive Black sleeve.
- Handcrafted in U.S.A.

### Reviews:

- March 2006 – "Sunny Cable Supreme Digital Cable, Speaker Wire and The Box" by Clement Perry, Publisher of The Stereo Times.

### Award:

- 2007 Editor's Choice Award presented by The Stereo Times.
- 2006 Publisher's Choice Award presented by The Stereo Times.
